NOVEMBER
2019

»» Welcome address

Dear Faculty experts, Dear trainees,

It is a pleasure and honour to welcome you all to Ioannina, the capital of Epirus and active cultural and scientific hub. Together, we shall provide focused training and information in key areas which are often not adequately covered in Oncology Curriculae or are by their nature difficult to teach in structured educational programs. We hope you enjoy this initiative, as well as the mountainous landscape of Epirus with its monuments, lakes, castles and churches.

This year's Masterclass will be held in collaboration with the Department of Medical Oncology of the University of Ioannina (DMO -UOI) and the Swiss Group for Clinical Cancer Research (SAKK) with the support of the Hellenic Group of Young Oncologists (ONEO). Critical thinking and analysis, interaction and networking are the foundations and also the aims of this educational outreach, emanating from an academic oncology department of the Greek North-West. We are looking forward to social/scientific networking between young Greek and Swiss trainees and faculty, as well as an exchange of variations and common patterns in way oncology and research are practiced. We hope you enjoy and that we will see you again in further masterclass events.

Yours truly,

George Pentheroudakis
Professor of Oncology, DMO-UOI

Roger Von Moos
SAKK President

» Rationale

WORKSHOPS:

To provide focused training and information in key areas of interest to oncology trainees, which are often not adequately covered in Oncology Curriculae or are by their nature difficult to cover in structured educational programs, as they necessitate interaction and specialized expertise. (Examples: Medical Statistics, Why choose Oncology, Training experiences abroad, Breaking Bad News, Research Ethics, Drug development etc.)

CLINICAL CASE PRESENTATIONS AND DISCUSSION:

The basic concept here is to bring the Resident to the podium. A Patient Case with history, presentation, pathology and imaging and 4-6 Multiple Choice Questions is prepared by a Faculty member and handed over to the Trainee a month before the Masterclass. The Trainee will have to study it, study relevant literature and present the Case with his/her proposed Answers to the MCQ and proposals for diagnostic/therapeutic strategies, that he/she should be able to justify and defend. A Discussion with the Expert Panel and the audience will take place either during the Case Presentation or immediately after it. Lively discussion and interaction are encouraged and should be elicited by the Experts in the panel.

OVERALL AIM:

An additional aim is to promote scientific interaction and social/scientific networking between young Greek and Swiss trainees and faculty, as well as an exchange of variations and common patterns in way oncology and research are practiced.
